ETHAN Realistic Graphics Kit v3

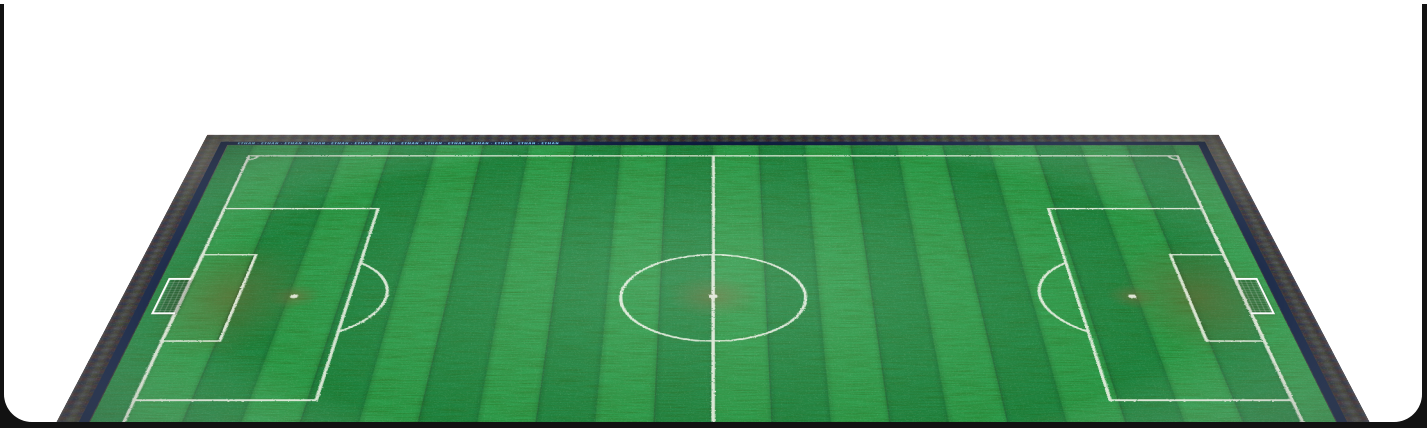

> **Honest note:** I draw in vector (SVG), so I can push it to realistic lighting, shading, grass texture and a premium UI, but not true photographs. For photorealistic art, use the AI image prompts in section 6 in Copilot, Microsoft Designer or Midjourney, then give those images to Copilot.

1. Realistic pitch + players + match HUD

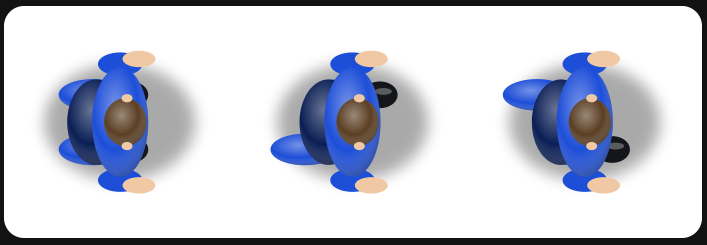

Floodlit grass with mowing stripes, blade texture, worn goalmouths and centre spot, rough chalk lines, 3D-style nets, shaded players with soft shadows, a shaded ball and a broadcast-style HUD.

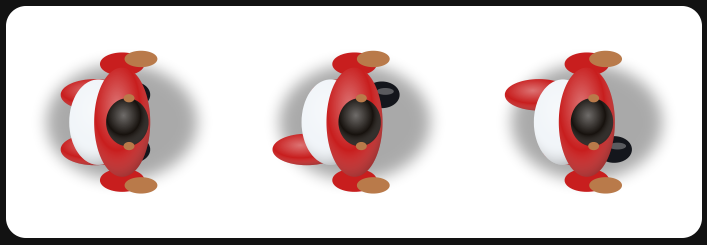

2. Broadcast camera view

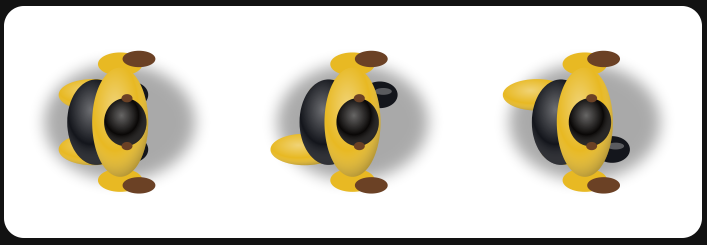

3. Top-down player sprites (shaded, idle + 2 run frames)

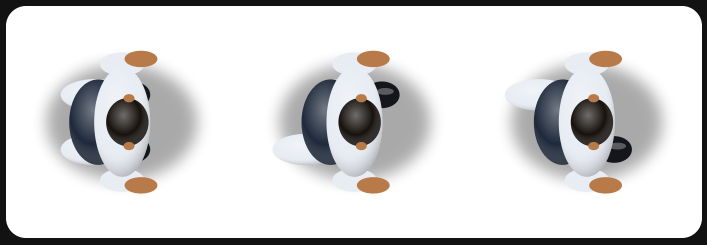

Home blue

Away red

Goalkeeper

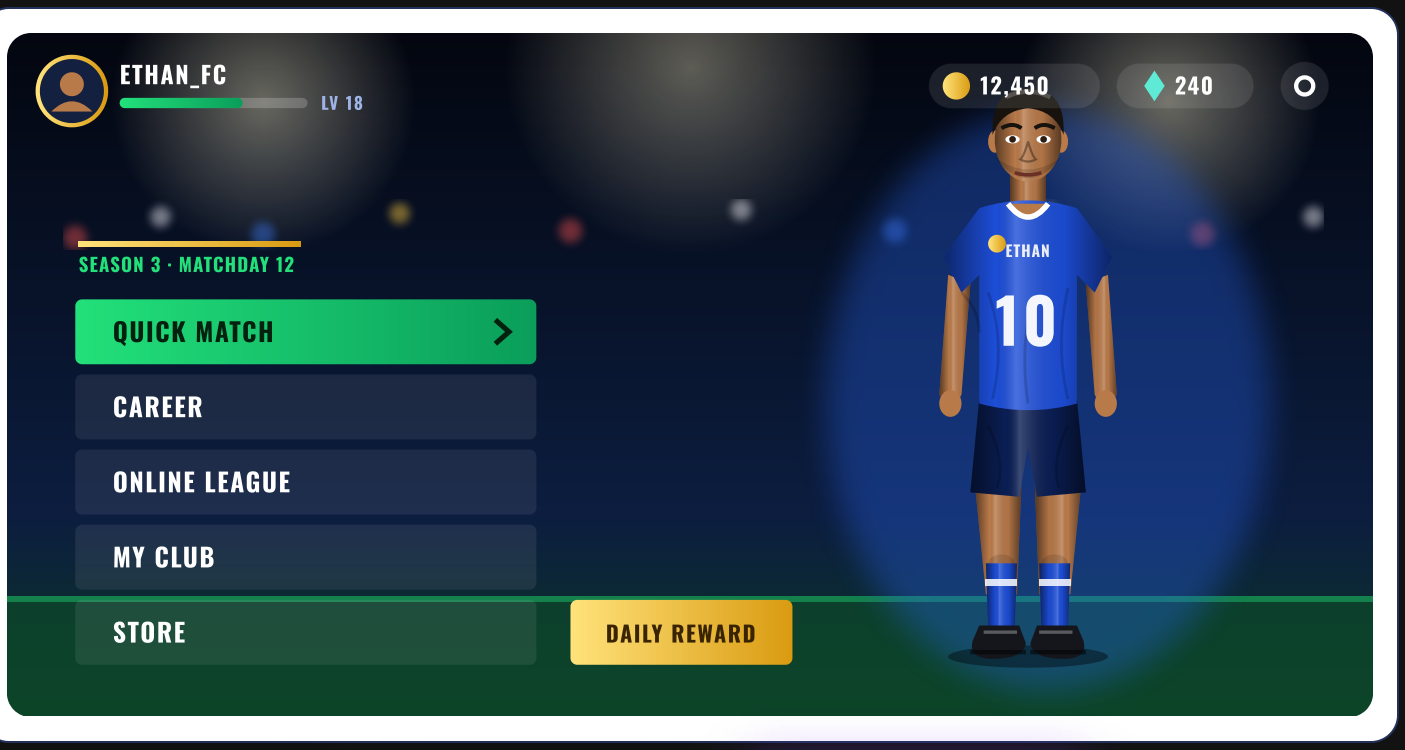

Third kit

4. Realistic character art

Home Away Third kit Goalkeeper

5. Premium UI: home screen, cards, stats radar

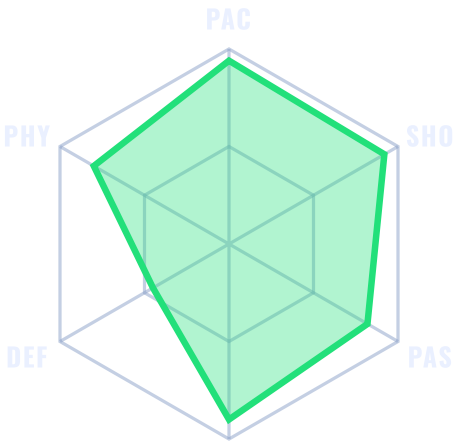

Player radar

DRI

6. AI image prompts for photorealistic art

Paste each into Copilot (image creator), Microsoft Designer, Leonardo or Midjourney. Use fictional players and no real logos.

```
1) APP ICON: Premium mobile game app icon for a football game called ETHAN, glossy metallic gold shield with a bold letter E, football behind it, deep navy to emerald gradient background, cinematic rim lighting, ultra detailed, square 1024x1024, no other text.

2) MENU BACKGROUND: Cinematic wide shot of a modern football stadium at night, bright floodlights, packed crowd in soft bokeh, glossy dew-covered grass, shallow depth of field, dramatic blue and emerald lighting, empty space on the left for menu buttons, 16:9, photorealistic, 4k, no logos.

3) HERO PLAYER: Photorealistic footballer in a plain blue kit with no logos, dynamic striking pose, low-angle shot, strong rim lighting, stadium lights blurred behind, sharp fabric and muscle detail, clean dark background, 3:4.

4) PITCH TEXTURE: Seamless tileable top-down texture of a professionally mowed football pitch, alternating light and dark stripes, fine grass blades, subtle dew, soft even lighting, photorealistic, 2048x2048.

5) CARD PORTRAIT: Studio portrait of a fictional professional footballer, front view, shoulders up, plain training top, dark gradient background with colored rim light, photorealistic, 3:4.
```

Copy image prompts

7. Copilot prompt for the realistic look

Paste this, then attach screenshots of sections 1, 4 and 5 plus any AI images you generate.

```
You are my senior Godot 4.x developer and 2D technical artist. Project: "Ethan", an original mobile football game in GDScript (Godot 4.x, landscape 1280x720, Mobile renderer, Android target). Use only original art and fictional names. ART DIRECTION: realistic broadcast look, not cartoon: floodlit night pitch, soft shadows, shaded kits, premium dark glass UI with gold and emerald accents. Match my attached screenshots.

TASK 1 - REALISTIC PITCH (scenes/pitch/Pitch.tscn)
- 10 px = 1 m. Pitch 1050x680 at origin (60,60). Draw markings in code with _draw(): touchlines, halfway line, centre circle r=91.5, penalty areas 165x403.2, goal areas
```

```
55x183.2, penalty spots 110 px from goal line, penalty arcs r=91.5 outside the box,
corner arcs r=10, goals 73.2 wide, 20 deep with net texture.
- Grass: seamless grass texture (use my AI texture if provided, else generate
procedurally) + 20 mowing stripes via a CanvasItem shader (light/dark by direction),
blade noise, worn patches (goalmouths, centre, penalty spots) from a mask texture,
chalk-like lines with slight edge noise.
- Lighting: CanvasModulate + PointLight2D floodlights at the corners, soft shadows
from players (Light2D shadows or a blob shadow), vignette, subtle bloom via
WorldEnvironment glow.
- Stands: blurred crowd layer with parallax and random flicker, LED ad boards with
scrolling "ETHAN" text.
- Camera2D follows the ball with smoothing, zoom limits and slight shake on goals.
```
